DOOR SYSTEM

#### System Features:

- Able to detect hard tags up to 4 feet or more on either side with standard tags
- One antenna is suitable for a single 3 ft door opening
- Multiple units can be placed to protect a wider opening
- System can be easily installed by the customer

#### System Specifications:

The 4.6 MHz SP is an innovative system package as a single panel transceiver. The system functions in nearly the same way as a standard RF system, but at a wider aisle width and requires only one antenna to operate. This system can detect tags up to 4 feet or more on either side of a single panel. If two panels are used, an electronics do not have to be synchronized, which minimizes installation time and after sales servicing.
